Adverse Determinations and Appeals

Step Therapy Criteria Selection Process

Review of the Formulary, including any limitations, such as prior authorization, quantity limits, step therapy, clinical management programs or exclusions, is consistent with up-to-date evidence-based outcomes and current published, peer-reviewed medical and pharmaceutical literature. Drugs included in the Step Therapy program are considered therapeutic alternatives to each other for their respective step therapy group. Therapeutic alternatives (drug protocols with different chemical structures that are the same therapeutic or pharmacological class, and usually can be expected to have similar outcomes and adverse reaction profiles when administered in therapeutically equivalent doses) are determined from FDA approved product information and pharmaceutical compendia sources. Exceptions for indications or uses are noted in the respective clinical criteria.
