

## 2023 Wellfleet Rx ADHD Medication Shortage Information

Pharmacies across the United States are currently experiencing a shortage on the generic versions of Adderall, Adderall XR, and Concerta. Wellfleet Rx has taken the following steps to mitigate the impact to our members:

### Quantity limits have been temporarily extended

- The quantity limits have been temporarily extended on lower strengths of the covered generics (dextroamphetamine-amphetamine, dextroamphetamine-amphetamine ER, and methylphenidate HCL). This allows pharmacies to dispense more units of lower strengths if higher strengths or extended-release versions are unavailable. The quantity limits will be reapplied once the shortage is over.

### Prescription override request support

- Wellfleet Rx is equipped to complete overrides to cover the brand Adderall, Adderall XR, and Concerta, which are normally excluded under the Student Formulary, on a case-by-case basis. The member or pharmacy may contact Wellfleet Rx if the pharmacy is unable to obtain the generic. An override to cover the brand drug at the member's generic copay will be applied and will remain active through 7/1/2023. If the shortage extends beyond 7/1/23, Wellfleet will re-evaluate the duration of future override requests.

### Helping ensure access to clinically appropriate alternatives

- Wellfleet is actively monitoring the shortage. Should both the generic and brand formulations of Adderall, Adderall XR, and Concerta move to a national shortage status, Wellfleet will ensure students have access to clinically appropriate alternatives.
